Do not use: • a calculator		

Please write clearly in black ink. Do not write in the barcodes.							
Centre number					Candidate number		
First name(s)							
Last name							

#### **INSTRUCTIONS**

- Use black ink.
- Write your answer to each question in the space provided. If you need extra space use the lined pages at the end of this booklet. The question numbers must be clearly shown.
- · Answer all the questions.

#### **INFORMATION**

- The total mark for this paper is **140**.
- The marks for each question are shown in brackets [ ].
- Quality of extended response will be assessed in questions marked with an asterisk (\*).
- This document has 24 pages.

## **ADVICE**

· Read each question carefully before you start your answer.

## Answer all the questions.

1		R In: irand	surance uses a computer system to calculate the price that customers pay for car e.
	(a)	The	computer system contains a CPU, GPU, RAM and ROM.
		(i)	State <b>two</b> factors that affect the performance of a CPU.
			1
			2
			[2]
		(ii)	Explain the difference between RAM and ROM, including how these are used by the computer system.
			[A1]
		(iii)	Describe <b>one</b> non-graphical use OCR Insurance may have for a GPU.
		(111)	Describe one non-graphical use OCIV insulance may have for a GPO.

(b)	The CPU uses pipelining to improve efficiency.	
	Explain what is meant by the term 'pipelining'.	
		[3]

(c)*	OCR Insurance's computer system uses secondary storage across the company in servers, client machines and for backup purposes.
	For each of these, discuss whether magnetic storage or solid state storage would be most suitable, taking into account the advantages and disadvantages of both.
	[0]

(d) Customers' details are stored in the flat file database table <code>Customer</code>. An extract of the table is shown below.

CustomerID	Surname	Title	Phone	CarReg
JJ178	James	Mr	(0121) 343223	DY51 KKY
HG876	Habbick	Miss	(01782) 659234	PG62 CRG
EV343	Elise	Mrs	(07834) 123998	HN59 GFR
PG127	Pleston	Mr	(07432) 234543	JB67 DSF

(i)	State what is meant by the term 'primary key', identifying the primary key in the table above.
	[2]
(ii)	Write the SQL statement that would show only the <code>CustomerID</code> and <code>Surname</code> fields for customers with the <code>Title</code> "Miss" or "Mrs".
	[4]
(iii)	Describe <b>one</b> problem that would arise with the flat file database structure if a customer wanted to insure more than one car at the same time.
	[2]

iv)	Describe how the flat file database structure could be altered to efficiently allow each customer to insure multiple cars at the same time. (You may assume each car is insured to only one customer.)
	ſ <i>E</i> :

2	(a)	(i)	Convert the denary number 231 to an unsigned 8-bit binary number.
			[1]
		(ii)	Convert the hexadecimal number 6F to an unsigned 8-bit binary number.
			[1]
	(b)		floating point number 0011010100 is stored using 6 bits for the mantissa and 4 bits for exponent, both in two's complement. This number is not normalised.
		(i)	Give the normalised version of this number, showing your working.
			[4]

	(ii)	Convert your answer to part (i) to denary, showing your working.
		101
		[3]
(c)	forn	I together the two numbers below. Both numbers are stored in normalised floating point nat, using 6 bits for their mantissa and 4 bits for their exponent which are both in two's aplement. Show the result in the same format and show your working.
		0110000110 +
		010100 0100
		[5]

Aw	ebsite sells tickets for sporting events. The website uses HTML, CSS and JavaScript.
(a)	Describe the purpose of HTML and CSS within the code of the website.
	HTML
	CSS
	[4]
(b)	One page in the website contains a hyperlink on an image. When the image stored as "ticket.png" is clicked, the user is hyperlinked to the page stored as "booking.htm".
	Write the HTML code to implement this hyperlink.
	[3]

[4]

The website charges a booking fee of £2.99 on each ticket sold. In addition, if the tickets are purchased from outside of the UK, £4.99 is added to the booking fee. The booking fee is calculated using a JavaScript function named bookingfee().

(c) Complete the definition of the bookingfee() function below.

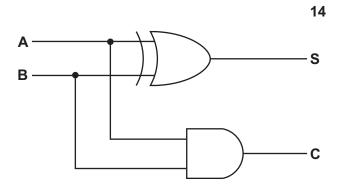

(d) The JavaScript function above is used to show users the booking fee. When users click to buy the tickets, the booking fee is calculated again on the server.

Duy	the tienete, the booking for to ballottated again on the bol vol.
(i)	Explain why server side processing is used to recalculate the booking fee.
	[3]
(ii)	Explain <b>one</b> advantage of client side processing to either the customer buying the tickets or to company who own the website.
	[2]

(e)		ers are able to search for and find the ticket website using a search engine. Search engines use indexing and ranking.
	(i)	Describe how a website is indexed by a search engine.
		[4]
		earch engine can use the PageRank algorithm to determine a website's ranking. The geRank algorithm utilises a damping factor.
	(ii)	State what is meant by the term 'damping factor'.
		[1]
	(iii)	Give <b>two</b> other factors that affect the output value given by the PageRank algorithm for a website.
		1
		2

ť	"The Computer Misuse Act means that computer users are criminalised for simply trying to learn how systems work."
	Discuss whether or not you agree with this statement.
	[9]

has	imp	s of a computer system have a unique username and password. The computer system emented two-factor authentication so that users must respond to either an email or text e containing a secret code to be able to access the system.
Let:		
A b	e a B	oolean value for if a user enters a valid username
B b	e a B	oolean value for if a user enters a password that matches their username
C b	e a E	soolean value for if a user is able to respond to an email containing a secret code
<i>D</i> b	e a E	soolean value for if a user is able to respond to a text message containing a secret code
Q b	e a E	Boolean value for if entry to the computer system is allowed
(a)	Cor	nplete the Boolean expression below:
	Q	≣[3]
(b)	Anc	ther Boolean expression for a logic system is shown below:
	O	
	G,	≣¬(¬A∧¬B)
	(i)	□ ¬ ¬ ¬ ¬ ¬ ¬ ¬ ¬ ¬ ¬ ¬ ¬ ¬ ¬ ¬ ¬ ¬
		Simplify this Boolean expression so that it does not include any negation. You must
		Simplify this Boolean expression so that it does not include any negation. You must explain which Boolean algebra rule(s) you are using at each step.
		Simplify this Boolean expression so that it does not include any negation. You must explain which Boolean algebra rule(s) you are using at each step.
		Simplify this Boolean expression so that it does not include any negation. You must explain which Boolean algebra rule(s) you are using at each step.

- (c) The logic circuit above has two inputs (A, B) and two outputs (S, C).
  - (i) Give the Boolean expressions for the outputs **S** and **C**.

S =	
C≡	
	[2

(ii) Complete the truth table for this logic circuit.

Α	В	S	С
0	0		
0	1		
1	0		
1	1		

	[2]
(iii)	Describe how this logic circuit can be adapted to add together two 4-bit binary numbers.
	[A]

15 BLANK PAGE

PLEASE DO NOT WRITE ON THIS PAGE

INP STA numone INP STA numtwo main LDA numone SUB numtwo BRP pos notpos LDA count OUT LDA numone OUT HLT STA numone pos LDA count ADD one STA count BRA main numone DAT DAT numtwo one DAT 1 count DAT 0

Fig. 1

(a) Various registers are used when the program above is executed.

(i)	State what is meant by the term 'register'.
	[2]
(ii)	Explain how the accumulator is used when the line BRP pos is executed.
	[2]

[4]

**(b)** Complete the table below to show the output(s) from this program given the inputs.

Inputs	Output(s)
12, 5	
18, 2	
16, 4	
3, 7	

(c)	Write an algorithm using pseudocode that has the same functionality as the code in <b>Fig. 1</b> .
	[4]

(d)\* In assembly language, different modes of addressing memory can be used.

Discuss the different modes used. You should include:

• W	How the operand value is determined  Vhat an operand of 27 would refer to in that mode  The reasons for requiring multiple modes of addressing	[12]
•••••		

7 A business uses an array with the identifier wNames to store workers' names. A variable with the identifier top is used to store the index of the last element to be added to the array, which is also the element which will next be removed.

### wNames

0	1	2	3	4	5	6
Kirstie	Martyn	Louise	Alex	Anna		

top	
4	

(a)	(i)	State the name of the type of data structure described above.
		[1]
	(ii)	Using pseudocode, write an algorithm that allows the user to enter a name which is then pushed onto the data structure above, checking first that the data structure is not full.

		21						
(b)	The same workers' names are stored in a binary search tree which is ordered alphabetically.							
	Kirstie is set as the root node, with Martyn, Louise, Alex and Anna added one by one.							
		Kirstie						
	(i)	Complete the tree diagram above to show where Martyn, Louise, Alex and Anna would be added to this binary search tree. [4]						
	(ii)	Describe the process of using the binary search tree above to search for the name "Zoe".						
		[2]						
	<b>/···</b> \							
	(iii)	Compare the efficiency of a binary search tree to a linked list when searching for data.						
		[2]						

	(IV)	Compare the emiciency of a binary search free to a hash table when searching for data.
		[2]
(c)		object oriented system is implemented to organise further information about each worker's indance. Classes, objects, methods and attributes are used in this system.
	(i)	State the meaning of each of the following terms:
		Object
		Method
		Attribute

Each worker has a name and an attendance figure which can be between 0 and 100.

metnoas	for all attr	ibutes. Y	ou do <b>no</b>	<b>t</b> have to	write co	de for th	providing ne constri	uctor me	ethod

## **END OF QUESTION PAPER**

# 24 ADDITIONAL ANSWER SPACE

If additional space is required, you should use the following lined page. The question number must be clearly shown in the margin(s).

#### Copyright Information

OCR is committed to seeking permission to reproduce all third-party content that it uses in its assessment materials. OCR has attempted to identify and contact all copyright holders whose work is used in this paper. To avoid the issue of disclosure of answer-related information to candidates, all copyright acknowledgements are reproduced in the OCR Copyright Acknowledgements Booklet. This is produced for each series of examinations and is freely available to download from our public website (www.ocr.org.uk) after the live examination series.

If OCR has unwittingly failed to correctly acknowledge or clear any third-party content in this assessment material, OCR will be happy to correct its mistake at the earliest possible opportunity.

For queries or further information please contact The OCR Copyright Team, The Triangle Building, Shaftesbury Road, Cambridge CB2 8EA.
